**Supplementary Figure 1. Time changes of markers related to cytokine release syndrome.**

(A) White blood cell count, (B) lymphocyte count, (C) CRP, (D) PT activity, (E) aPTT activity, (F) Fibg.

We demonstrate the medians and IQRs of each marker. The values are displayed on the dates after CAR-T cell infusion.

aPTT, activated partial thromboplastin time; CAR, chimeric antigen receptor; CRP, C-reactive protein;

Fibg, fibrinogen; IQR, interquartile range; PT, prothrombin time.
